

# BENTONITE

SODIUM BENTONITE

## SUMMARY:

Arumpo Stockfeed Bentonite is a clay formed from volcanic ash deposits. It comes in fine and granular grades and is added to ruminant diets to assist in allowing improved adaptation to high concentrate diets.

## CONTAINS:

**Sodium Bentonite; 1000 g/kg**

Contains minimum 95% Montmorillonite.

## DOSE RATE:

Feeding rates should be 3% to 4% of finished feed initially and can be reduced after 3 to 4 weeks to 1% to 2% of finished feed.

## SODIUM BENTONITE

Arumpo Stockfeed Bentonite is ideal for inclusion in most feeds and is available in milled, fine and granular grades to suit various requirements. Arumpo Stockfeed Bentonite allows improved adaptation to high concentrate diets and assists in the prevention of acidosis in sheep and cattle. It also guards against the effect of aflatoxins in contaminated grain inadvertently fed to stock. Arumpo Bentonite is a completely natural product which can absorb 10 to 16 times its dry volume in water. Bentonite is also used in dam sealing and repair applications, as well as use as a soil improver.

## PACK SIZES: 2kg, 5kg & 25kg bags

This product does not contain restricted animal material.

Store in a cool dry place, nil withholding period.

Store away from substances such as fuels, fertilizers, chemicals and pesticides to avoid absorption of any taint.
