

COPPER SULPHATE

COPPER SULPHATE

SUMMARY:

Copper Sulphate, also known as bluestone, is a blue crystalline product containing the trace element copper. It is widely used for a variety of animal health applications and traditional remedies including control of fungal diseases, cattle footbaths, correcting copper-deficient soils or feed rations. Copper is needed in hemoglobin synthesis and is a component in many enzyme systems in the production of the hair and the skin pigment melanin, the formation of connective tissues, and the function of the immune system. Some general signs of copper deficiency include Anemia, Abnormal appetite, reduced growth rate, failure in hair, steely wool, Abnormal skeletal development, reduced protein synthesis, nerve disorders, lameness, diarrhea, weak broken bones, cardiovascular disorders, and reproductive failure. Copper is a trace element or micro mineral and is only required in small amounts.

CONTAINS:

Copper **25%**

DOSE RATE:

Classified as hazardous.

Seek professional nutritional advice for use.

Sheep are highly susceptible to copper toxicity.

COPPER

Benefits of correct copper levels in a balanced diet.

- Bone formation
- Proper cardiac function
- Immune system
- Cell respiration
- Important in pigments
- Reproduction / fertility

PACK SIZES: 2kg, 5kg & 25kg bags

This product does not contain restricted animal material.

Hazardous. Keep out of reach of children.

Harmful if swallowed.

Wear appropriate protection when handling.

Store in a cool dry place, nil withholding period.

Store away from substances such as fuels, fertilizers, chemicals, and pesticides to avoid absorption of any taint.

This is a guide only, use as directed, please seek professional nutritional advice.
