

# DIATOMACEOUS EARTH

DIATOMACEOUS EARTH

## SUMMARY:

Diatomaceous Earth [amorphous silica] is the fossilized remains of tiny single cells plants [diatoms] found on the beds of lakes and oceans, millions of years old. The sedimentary rock is mined and processed, resulting in the product Diatomaceous Earth, which contains silica, and is a fine powder with microscopically sharp edges. DE has many uses, including animal feed supplements, and Parasite control in livestock.

## CONTAINS:

DIATOMACEOUS EARTH: Silica Sodium, Magnesium, Iron.

## FEEDING RATE

Suggested feeding rates for Sheep, Cattle, Pigs, Goats, Chickens, Alpacas and Horses is to add Diatomaceous Earth to feed at around 2% of bodyweight. Seek manufacturers advice for further recommendations.

## DIATOMACEOUS EARTH

Reported benefits of feeding DE are:

- Increased general health & appearance.
- Internal & external parasite control
- Increased growth and feed conversion.
- Odour control.
- Increased production

DE is claimed to kill parasites by way of the microscopic sharp edges scratching the outer surface of the parasite resulting in dehydration and death of the parasite.

## PACK SIZES: 2kg, 5kg & 25kg bags

This product does not contain restricted animal material.

Nil Withholding period.

Store in a cool dry place, nil withholding period.

Store away from vermin.
